CS211 (Theory of Computation I)

DUE: April 3rd**HOMEWORK II (CO1)****1- Submit your solution as a single PDF file using Moodle.****2- Organization and Presentation worth 20% of the mark.**

Q1. Design a DFA for $L = \{ w \in \{a, b, c\}^* : w \text{ contains } \mathbf{abbc} \text{ as a substring} \}$.

Q2. Design a DFA for $L = \{ w \in \{a, b, c\}^* : w \text{ does not contain } \mathbf{abbc} \text{ as a substring} \}$.

Q3. Design a DFA for $L = \{ w \in \{a, b, c\}^* : w \text{ contains both } \mathbf{aa} \text{ and } \mathbf{bb} \text{ as substrings} \}$.

Q4. Design a DFA for $L = \{ w \in \{0,1\}^* : w \text{ contains an odd number of 0's and number of 1's is divisible by 3} \}$.

Q5. Convert the following NFA to DFA:

$M = (Q, \Sigma, q_0, \delta, F)$, $\delta(q_0, a) = \{q_1, q_2\}$, $\delta(q_1, \lambda) = \{q_3\}$, $\delta(q_3, a) = \{q_2, q_3\}$,
 $\delta(q_2, b) = \{q_4\}$, $\delta(q_3, b) = \{q_5\}$, $\delta(q_4, \lambda) = \{q_5\}$, $\delta(q_4, a) = \{q_4\}$,
 $\delta(q_5, a) = \{q_5\}$, $F = \{q_3, q_5\}$

Q6. Minimize the following DFA using the marking algorithm as given in class:

$M = (Q, \Sigma, q_0, \delta, F)$, $\delta(q_0, a) = q_1$, $\delta(q_0, b) = q_3$,
 $\delta(q_1, a) = q_2$, $\delta(q_1, b) = q_4$, $\delta(q_2, a) = q_5$, $\delta(q_2, b) = q_4$,
 $\delta(q_3, b) = q_2$, $\delta(q_3, a) = q_4$, $\delta(q_4, a) = q_5$, $\delta(q_4, b) = q_2$,
 $\delta(q_5, a) = \delta(q_5, b) = q_5$. $F = \{q_0, q_5\}$
